

PaperForge

Testing new features

This document tests PaperForge new features.

This page uses top-left coordinates, page margins,
automatic font registration, text measurement,
wrapping and compressed content streams.

Below there is a JPEG image rendered as a PDF XObject.

JPEG image test

Rendered from file path, preserving aspect ratio

*The same JPEG can be reused multiple times and should be
registered only once internally through the image registry.*

Second page - landscape orientation

This page uses the traditional PDF coordinate system:

the origin is at the top left corner

The same image is shown below.

If image data is placed in the image data dictionary,

should be placed in the document.

Bottom area calculated from page margins
